Jason Vaughan

527 Broadway
San Francisco, CA 94133
415-336-6116
jason@jasonvaughan.com

Objective:

Seeking a full-time engineering position at a busy event center or production company. I enjoy technical challenges and working with talented colleagues and state of the art equipment. My passion is learning new technologies and putting my skills to use.

Technical Education

OSHA 10 and OSHA 30 Certifications
Completion of IATSE Local 16 Apprenticeship Program
Barco Certifications:
Screen Pro, Encore, Encore II Basic and Expert, Video Engineering Level A and FSN Production Switcher
Analog Way – Live Core Engineer Certified
San Francisco Recording Institute Graduate
Pro Tools 9 / 10 Professional Recording Software Certified
Microsoft Windows Media Service Provider Certified
Citrix XEN Server Virtualization Certified
Citrix XEN Desktop Certified
Cisco Certified Network Design Associate
Sun Workstation and Enterprise Certified
Certified Microsoft Office Trainer
College Math and Computer Science Classes

Professional Experience

Video Engineer (EIC), Technical Director & Multimedia Designer / Operator 2007 – Present

I frequently freelance as EIC or Media server operator for many well known AV companies on events around the country and all over the world. I am fluent with Panasonic, Barco and For-A production switchers and have some experience with Kahuna and Ross. I am very well versed in engineering Sony and Panasonic Camera Systems. I am fluent with ALL current hi-res switching products, Vista Systems, Barco and Analogue Way. I have been in charge of entire video system installations onsite, including the pre-production and creation of wiring diagrams, pixel mapping templates, records, equipment lists and labor schedules. As a content manager / operator I interface directly with CEOs, CFOs, EVPs, VPs and XComs and assistants to create or revise their presentation content with my expert knowledge of PowerPoint, Keynote, and the Adobe CC Suite. I'm known for my quick work, and ability to act decisively under a high-pressure production environment. I have in depth contacts and excellent relationships with Production companies, AV companies and other freelance professionals.

I often contract directly as a video centric Technical Director. In this position I create or validate the onsite engineering plan, media specifications and related documents. These then get translated to ensure the content design team is preparing media to spec. I am frequently asked to explain system capabilities “non-technically” to the production team and end clients. My experience with the latest technologies, in depth understanding of video engineering, and ability to perform every job within the video department at a high level, is invaluable working with clients who have contracted with multiple vendors and need someone who can tie it all together. I frequently use industry standard tools such as, Microsoft Office, PowerPoint, Keynote, Vectorworks reader and Adobe Creative Cloud.

Video Engineer in Charge, Graphics and Media Server Operator, Webcast, Networking & Computer Technician. 2010 - Present

IATSE, LOCAL 16 *San Francisco, CA*

I have worked for hundreds A/V and production companies and in many capacities via my years of apprenticeship and journeyperson membership with the International Alliance of Theatrical Stage Employees Union (IATSE) SF Local 16, by dispatch but usually via letter of request. I’ve been the EIC for many large venue corporate and entertainment events, exhibits, complex LED video walls and floors, blended Projection, and have additional experience as the technical lead for Webcasts and Networking installations. I am usually the first name requested to Local 16 for complex hi-res screen switching, automation and media server programming and my reputation recognizes my achievements. I have also worked as union crew chief prepared steward reports, so I am familiar with all union regulations and rules. I’m also well known in the industry by producers and A/V companies for my technical skills, quick learning abilities and work ethic. Taking short term jobs assignments from Local 16 keeps my technical skills sharpened by always working with the latest technologies and forces me to constantly learn new technical skills as this industry ever evolves. I’m very active online in industry tech forums, frequently helping others and constantly learning new tricks of the trade.

I am also a paid instructor for the IATSE Local 16 training and trust program where I teach Networking and Video Engineering classes offering access to the latest of technologies to our membership.

Co-Founder / VP Sales & DevOps / CEO 1997-2007

iPolis Corporation *Scotts Valley, CA*

In 1996 with 2 business partners I co-founded the iPolis Corporation. We were the first webcasting company focused on the Public Access, Education and Government market. Initially, I was a co-investor and the VP of Sales & DevOps. I brought in our first major clients including; The City and County of San Francisco, The City of Oakland, The City of Long Beach, City of Belmont, City of San Mateo, and Hampton University. We integrated our systems into their control studios to bring public meetings to the internet and archived them for on-demand delivery as a turnkey system. As VP of DevOps I was in

charge of translating client needs and requirements into products that could satisfy them. Our proprietary software-based system was later recognized as the first “Software As a Service” (SAS) of its time.

During the10-years with my start up I helped pioneer webcasting technologies; this is well before the time of YouTube and Broadcast.com. I created features like automated, scheduled webcasts, linked indexing, closed captioning integration, embedded transcripts, agenda linking, and online polling. In the process of integrating these services it was clearly important for me to have an in depth understanding of audio and video engineering fundamentals, so I learned all I could. When I eventually took over as CEO I also needed to quickly develop the important executive management skills to operate the day to day operations of our business and guide us through our eventual company buyout which took place in 2006 for over $2M.
